

NEW product

RCLL-1

Remote Controlled Line Level Volume Control

Great for use with second zone line level outputs to control a whole house amplifier, or in applications using a single source when the level needs to be remote controlled. By using a universal remote control, all the essential commands are available such as volume up, volume down, and mute. Additionally a smart volume up and down infrared control sequence makes precise level control possible. Push the up/down remote buttons in a staccato fashion and the level jumps up or down in quick steps, hold down the button continuously and a slow ramp function engages. This allows you to quickly ramp to the desired level, and then fine tune without over or undershooting.

The RCLL-1 is Audiophile quality, with no semi-conductors in the signal path resulting in a flat, noise free signal. The stylish chassis blends unobtrusively into any decor and features an auxiliary chassis mounted volume control. Like most of the Audioplex product line, the RCLL-1 is hand crafted in the USA in our own factory and comes with a Lifetime Warranty!

Remote Control Required
(sold separately)

Specifications.....

- Gold plated RCA's
- Emitter Input
- 12 Vdc Power Supply Included
- Table Top Chassis
- 6"W x 2.75"H x 5"D

Professional Installation Recommended.
