

# SUTTLE

## Traditional Telco

### Surface Mount Dual Provider Inline Switch

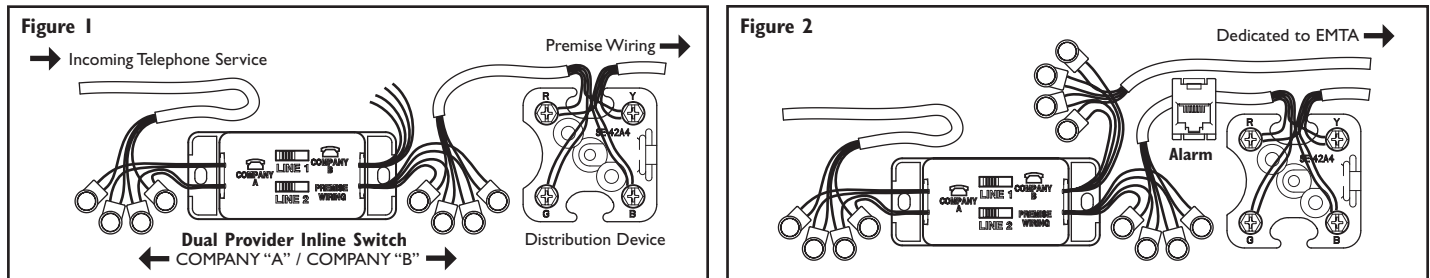

#### Product Description

The Inline Switch from Suttle allows two providers' service to be controlled at the premise distribution device through a simple, customer-operable switch. The Inline Switch eliminates the need for service truck rolls and jack re-wiring when the service is changed by the home owner. Intended for Star Wired/Home Run/Daisy Chain with a distribution device applications.

#### Application

This Inline Switch is designed for a competitive service provider to distribute voice service through a home's existing wiring. The Inline Switch must be terminated at the distribution device where the incoming wire enters the customer's premise. The incumbent service provider's incoming wires and the premise wires are terminated to the blunt cut leads using the butt splice connectors (see figure 1). All jacks in the premise will be controlled through this Inline Switch. The Inline Switch may be integrated with an alarm dialing device (see figure 2).

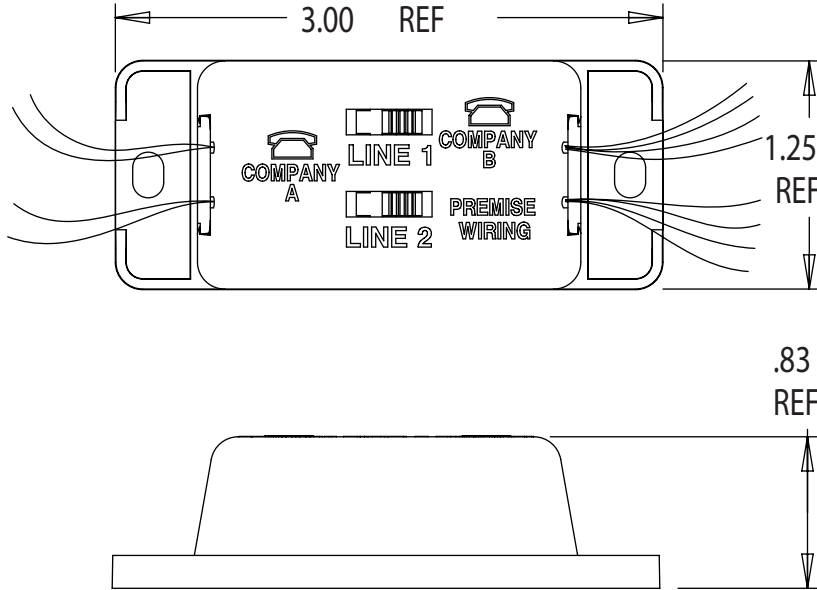

#### Features

- Customer-operable switches for line one and line two.
- Wire it once - no rewiring required if service is turned back to the incumbent.
- Switches are inset below front face to avoid accidental switching.
- Customizable for your name/logo - Reinforce your brand at the visible point of service

## Specifications

Current/Voltage: - - - - - 125 VDC @ .5 amp  
cULus Listed (pending)
