

WireTracks[®] iCove

your home will never be obsolete again

With the **WireTracks iCove**, your portable electronics become beautifully integrated into your home and not just electronic clutter.

The **WireTracks iCove** is an in-wall display and storage cabinet for portable electronics that accepts electrical and low-voltage wiring connections. It works with almost any device that has a docking station and, because of the design, you can change or upgrade devices as often as you like.

You can connect your Apple iPod or portable satellite radio to your home theater or whole house audio system, charge your mobile phone without trying to find a charger, seamlessly integrate your PDA into your office, and clean up your desk and counter space.

WireTracks is always focused on the future. We think about your current needs and design our products to meet your future needs. We know that electronics will change and that you will need to integrate them into your home. The **WireTracks iCove** continues this vision by taking the portable devices that you love and giving them an attractive place to live.

The **WireTracks iCove** is one component of the WireTracks system that provides you with a complete infrastructure for smart home technologies. Once installed, you will be able to enhance your home and make changes them as often as you like.

Dealer inquiries are welcome.

Custom! Custom! Custom!

Your home, your life, your choices. The WireTracks iCove can be framed out with standard molding or a picture frame of your choice. The back wall of the iCove can be left alone or covered with a piece of thin material such as fabric, paper, or wood veneer.

behind-the-scenes

This picture shows what the iCove looks like behind the wall. Notice the Cachebox (the hidden electrical box) that drops through the cabinet opening for easy remodeling installations.
